

Notes: If you have the Turbo S please contact us to order the additional bracket required for the Turbo S

Sport Bumper Installation

Step 1: Remove the grille by pulling down on the plastic tabs on the top of the grille.

Step 2: Remove the lower tow hook if your RZR is equipped with them. If not, ignore this step.

Step 3: Remove skid plate from bumper

Step 4: With the skid plate removed, start bolting the bumper on to your RZR. **Start with the top 2 bolts** and work your way down to the bottom. Make sure to hand tighten each bolt until all 4 bolts are in. This makes it much easier to line up all of the holes. If you do tightened one at a time. There is a chance the holes will not line up

Step 5: Mount your skid plate back on to the bumper

WARNING Do not use bumper as a tow point.
